1.0 INTRODUCTION

At the request and authorization of Moving Pillsbury Forward, NFP; Fehr-Graham & Associates, LLC (Fehr Graham) has completed a Phase II Environmental Site Assessment (ESA) on the former Pillsbury Plant located at 1525 East Phillips Street in Springfield, Illinois 62702.

1.1 Objective

The purpose of the Phase II ESA was to evaluate the presence of impacts to soil and groundwater associated with the recognized environmental conditions (RECs) and significant data gaps identified during the Phase I ESA dated March 17, 2022, and to determine how potential contamination may impact future redevelopment efforts on the Subject Property.

1.2 Site Description

The Property consists of 16 parcels of land encompassing approximately 20 acres, including one (1) 18.6-acre parcel (main parcel) and several smaller parcels located to the southeast and west of the main parcel. The Property is located at the northeast corner of the intersection of East Phillips Street and North 15th Street and is identified by common address 1525 East Phillips Street, Springfield, Illinois 62702. The grounds consist of a conglomerate of interconnecting structures formerly used for grain milling, manufacturing, warehousing, and offices (Subject Property buildings), as well as silos for grain storage. Several buildings have been demolished since the time of facility operations. A Site Vicinity Map depicting the regional location of the Property is provided as Figure 1, and a Site Layout Map is included as Figure 2.

1.3 Background

A Phase I ESA, dated March 17, 2022, was completed by Fehr Graham on behalf of Moving Pillsbury Forward, NFP. The Phase I ESA identified the following REC associated with the Property:

- The storage and handling of hazardous materials and petroleum products for large scale manufacturing operations with a history of violations and over 40 years of operation prior to robust environmental regulation presents the potential for historical releases to the environment through undocumented spills and leaks and/or improper disposal of wastes.
- Based on the findings of prior assessments which were completed during the time of facility operations and included detailed site reconnaissance, there was historical discharge of oils and/or other hazardous materials or petroleum products to drains within the facility. Given the age of the facility and unknown integrity of piping, it is possible that discharges of hazardous materials and/or petroleum products to the sanitary network resulted in releases to the environment.

- Four (4) USTs were abandoned in place in 1990; however, UST investigation sampling did not include all potential contaminants of concern applicable for the historical tank contents, and the piping may not have been properly removed or abandoned. Therefore, historical operation of the USTs may have resulted in previously unidentified releases of petroleum products to the environment through tank or piping leaks or tank overfills.
- There is a potential for past releases of hazardous materials and/or petroleum products to have occurred from the long-term use of railroad spurs on the Property through leaching of chemicals from railroad spurs and ties, treatment of track areas with pesticides/herbicides, engine emissions, and/or leaks and spills during loading/unloading or idling of damaged locomotives.

Adjoining and Surrounding Sites

- There is a potential for past releases of hazardous materials and/or petroleum products from railyard operations on the northeast adjoining site to have migrated onto the Property and negatively impacted underlying soil, soil gas, and/or groundwater.

In addition, the following significant data gaps were encountered that have the potential to lead to the identification of additional RECs:

- The site reconnaissance could not be completed due site access not being permitted. There is potential for storage tanks, drums, waste dumping, or other evidence of releases of hazardous materials and/or petroleum products to the environment which cannot be adequately assessed without Property access for reconnaissance.
- Two (2) buried fuel oil tanks are depicted on the 1950, 1952, and 1972 historical Sanborn Maps near the corner of East Phillips Street and North 16th Street. It is likely that these tanks are the same as the three (3) abandoned fuel oil tanks reportedly located at the south end of Warehouse 3. However, since the tanks are depicted in a slightly different location and the number of tanks is inconsistent, it is possible that the Sanborn Maps depicted additional USTs on the Property which have no record of removal or abandonment.

The following Business Environmental Risks (BERs) that exist beyond CERCLA liability may be associated with the Property:

- Asbestos containing building materials have been documented on the Property. Significant asbestos removal efforts were completed by US EPA; however, asbestos containing materials are anticipated to remain in portions of the facility and may exist in shallow soils as a result of documented improper building demolition activities.
- Based on the construction date of the Property buildings and silos, there is a potential for painted surfaces to contain lead above regulatory levels.

Due to the identified RECs and significant data gap, further investigation was recommended to evaluate the potential for contaminated soil, groundwater, and/or soil gas to be present on the Property, which could impact future redevelopment efforts and/or construction. Moving Pillsbury Forward, NFP elected

to investigate potential environmental impacts related to the former use of the USTs, historical industrial operations, and the long-term use of railroad tracks and spurs on the Subject Property, as well as the adjoining sites.

1.4 Scope of Work

The planned scope of work for this Phase II ESA included the following tasks:

- Ground penetrating radar (GPR) scan to identify potential orphaned USTs or indications of UST excavations.
- 70 soil borings to facilitate the collection of soil samples for laboratory analysis.
 - 15 of the 70 locations to be sampled for asbestos within the first six (6) inches below ground surface.
- Installation of 15 monitoring wells to facilitate the collection of groundwater samples for laboratory analysis.

The completed Phase II ESA field activities and findings are presented in the following sections.

2.0 FIELD ACTIVITIES

From May 2 to May 6, 2022, and May 9 to May 13, 2022, Mr. Tony Guajardo and Ms. Hannah Insko of Fehr Graham were on site to oversee Phase II ESA activities. Fehr Graham staff were accompanied by GeoServe of Woodstock, Illinois, the procured drilling contractor. All field and sampling activities were performed in accordance with the Illinois Environmental Protection Agency (IEPA) voluntary cleanup program known as the Site Remediation Program (SRP)

2.1 Utility Locate and GPR Scan

Prior to the drilling activities, a Joint Utility Locating Information for Excavators (J.U.L.I.E.) locate was ordered by GeoServe to identify the location of subsurface public utilities leading into the Property. A private utility location and boring clearance was also conducted to clear individual boring locations and to identify potential USTs and/or former backfilled excavations utilizing GPR technology. The GPR scan did identify one UST near SB-48.

2.2 Soil Investigation

A total of 70 soil borings (SB-01 through SB-70) were advanced to assess the presence of soil contamination on the Subject Property. Soil borings were advanced until 16, 20, or 24 feet below ground surface (bgs), depending on location, and at least five (5) feet below the field-interpreted groundwater table from observation of soil cores. A Sample Location Map depicting the locations of the soil borings is included as Figure 3.

GeoServe utilized a track-mounted GeoProbe[®] Model 7822 DT for advancing the soil borings. Soil cores generated using the GeoProbe[®] were extracted using dual tube sampling systems, equipped with four (4)-foot long, disposable polyethylene sample liners. The soil cores were field-screened for volatile organic compounds (VOCs) at half (0.5)-foot intervals by Fehr Graham staff with a RAE[®] Systems MiniRae 3000 photoionization detector (PID) equipped with a 10.6 eV lamp. The PID was calibrated to background air and 100 parts per million (ppm) isobutylene prior to the commencement of daily activities. The soil cores, as extracted, were visually examined and the observations were logged by Fehr Graham staff on soil boring logs.

Two (2) soil samples were collected from each soil boring. Since evidence of contamination (i.e. elevated PID readings, odor, staining) was identified in only one (1) soil core, the soil sample intervals were generally selected from the upper three (3) feet of the ground surface and the three (3) feet above

groundwater saturation. However, the soil core exhibiting slightly elevated PID readings (SB-08) was sampled at a depth interval consistent with the evidence of impact. Samples were submitted for laboratory analysis of the following analytical suites:

- Volatile Organic Compounds (VOCs)
- Semi-volatile Organic Compounds (SVOCs)
- Pesticides
- Polychlorinated Biphenyls (PCBs)
- Target Analyte List (TAL) Metals
- Cyanide
- pH
- Asbestos (collected from 18 locations)
- Total Petroleum Hydrocarbons (TPH) (only collected at SB-08)

Soil samples were collected into pre-cleaned laboratory-provided containers, stored in a cooler on ice for the duration of the day's activities, and relinquished to the laboratory under standard chain-of-custody procedures at the earliest opportunity.

2.3 Groundwater Investigation

Groundwater was generally encountered during drilling activities at approximately 6-10 feet below ground surface (bgs). The investigation included the installation of 15 two (2)-inch monitoring wells for the purpose of groundwater sample analysis for VOCs, SVOCs, TCL Metals, Cyanide, PCBs, and Pesticides. Ten (10) of the monitoring wells were installed to approximately 15 feet bgs and five (5) were installed to approximately 20 feet bgs, with 10 feet of machine-slotted PVC screen and a flush mount level with the ground surface. Fehr-Graham personnel developed the wells June 13, 14 & 15, 2022 by removing at least 10 well volumes of water (based on the measured static water level immediately following installation) or purging until the water was visibly clear. Groundwater samples were collected using low-flow methodology on June 22 & 23, 2022. Samples were submitted for laboratory analysis of VOCs, SVOCs, TAL Metals, Cyanide, PCBs, and Pesticides. During the sampling activities free phase petroleum was discovered in MW-13.

Groundwater samples were collected into pre-cleaned laboratory-provided containers, stored in a cooler on ice for the duration of the day's activities, and relinquished to the laboratory under standard chain-of-custody procedures at the earliest opportunity.

2.4 Soil Gas Investigation

No soil gas sampling occurred at the Property as part of the focused Phase II ESA.

3.0 RESULTS

3.1 Site Geology and Hydrogeology

The prevalent subsurface geology encountered consisted of one (1) to four (4) feet of surficial fill materials underlain by clay followed by sands from approximately 14 to 16 feet below ground surface (bgs) to the terminus of boring. Bedrock refusal was not encountered. Soil boring logs detailing the specific geological conditions encountered at each soil boring location are included in Attachment 1. Groundwater was observed in the soil borings at approximately 15 feet bgs with a static water level measured at approximately 10 feet bgs in temporary wells following drilling.

3.2 Analytical Results

Samples were submitted to PACE Analytical Laboratories in Green Bay, Wisconsin for laboratory analysis. Results were compared to the Tier 1 remediation objectives for residential and industrial/commercial properties, as established in Title 35 of the Illinois Administrative Code (35 IAC) Part 742, Tiered Approach to Corrective Action Objectives (TACO). The TACO Tier 1 remediation objectives (ROs) are a series of risk-based chemical concentrations derived for potential human exposure pathways (i.e., ingestion, inhalation) that are utilized by Illinois Environmental Protection Agency (Illinois EPA) cleanup programs.

3.2.1 Soil Analytical Results

Analytical results indicated select parameters were detected in soil above laboratory reporting limits, as presented in *Table A*. Parameters presented in **bold** font indicate the detected concentration exceeds one or more TACO Tier 1 RO for residential and/or industrial/commercial properties. Concentrations that were estimated by the laboratory are detections but are not counted as exceedances. 4.0 DISCUSSION

4.1 Tier 1 Exceedances

None of the analyzed constituents were detected at concentrations exceeding their respective Tier 1 Ros, with the exception of the following:

- Two constituents were detected above a Tier I RO. **Carbazole** was detected at concentrations of 0.91 milligrams per kilogram (mg/kg) in SB-54 (1.5-2.5'), exceeding the Class I soil component to groundwater ingestion exposure route RO of 0.6 mg/kg. In addition, **Naphthalene** was detected at a concentration of 2.4 mg/kg in in the same boring, exceeding the construction worker inhalation exposure route RO of 1.8 mg/kg.
- Three different inorganic contaminants were found to exceed a Tier I RO. **Arsenic** was found to exceed the 13 mg/kg *soil ingestion exposure route* standard in multiple locations listed in Table B below. Levels range from 13.4 to 31.7 mg/kg. In addition, at one location the level of arsenic exceeds the soil component to *groundwater ingestion exposure route*.

Lead exceeded the Tier I RO for Soil Component to Groundwater Ingestion Exposure route at SB-70 with a level of 172 mg/kg that exceeds the soil pH based Tier I RO level of 107 mg/kg.

Manganese exceeded the 1600 mg/kg soil residential *ingestion exposure route* standard in multiple locations listed in Table B. Levels ranged from 1890 to 2240 mg/kg. In one location (SB-55) the manganese level was 4900 mg/kg that not only exceeds the *soil residential ingestion exposure route* objective, but also the *Soil Construction Worker Ingestion Exposure Route* standard.

- Two organic pesticides were found to exceed a Tier I RO. **Chlordane** was found at the SB33 location at a level of 7.1 mg/kg which exceeded the Tier I RO of 1.8 mg/kg for the *Residential Ingestion Exposure Route*. **Dieldrin** was also found at SB33 at a level of 0.0072 mg/kg that is above the 0.004 mg/kg Tier I RO for the *Soil Component to Groundwater Ingestion Exposure Route*.

Table B summarizes the constituents detected in soil exceeding an exposure route and the specific exposure route(s) exceeded:

4.2 Data Assessment Report/Data Validation

Soil, groundwater, and quality assurance/quality control (QA/QC) samples were received by PACE Analytical Laboratories of Green Bay, Wisconsin on wet ice and at 4 degrees Celsius +/- 2. Submitted QA/QC samples for soil sampling included the following: field duplicates collected from SB-10 (1.8'-2.8'), SB-35 (0.5'-1.5'), SB-64 (4.5'-5.5') and SB-45 (1.3'-2.3') and eight (8) VOC trip blanks.

Analysis of the trip blanks indicated constituent concentrations were below laboratory quantitation limits.

All samples were analyzed within the respective analytical methods' maximum holding times. It was determined that the data validation results are acceptable, the analytical data is considered usable, and the project data quality needs were met for this assessment.

QA/QC sample results, including trip blanks analytical results are included in laboratory analytical reports which are included in Appendix 2.

5.0 CONCLUSIONS

5.1 Findings and Recommendations

Fehr Graham evaluated the Subject Property for potential contamination associated with the RECs and significant data gap identified in the Phase I ESA. There were 70 soil samples and 15 groundwater samples collected from the Subject Property and analyzed for VOCs, SVOCS, Inorganics, Cyanide, PCBs and Pesticides. Free product was discovered at MW-13 during the groundwater sampling activities. The GPR scan did locate a UST near MW-13.

Arsenic was discovered at the site that will require cleanup. This will be total removal and disposal, aggregation into a berm on the far east side of the site with an approved cap or use of an engineered barrier. The cleanup is needed regardless of end use.

The Manganese impacts would be cleaned up in the same fashion as the Arsenic, but only if the end use will be residential.

The one Lead impact will likely not require active cleanup, but confirmation sampling using SPLP analysis and exposure modeling under the Site Remediation Program using the Tiered Approach to Corrective Action Objectives (TACO) to address exposure.

The Chlorodane impact would require on-site treatment or excavation and disposal if the end use is residential. If the end use is commercial or industrial cleanup would not be required.

The Dieldrin will likely also require removal to eliminate the impact. In our experience using the TACO models for Dieldrin often do not help.

The Manganese in the groundwater should be addressed by collecting filtered samples to remove turbidity. In our experience turbidity leads to false positives with inorganics.

Overall, we recommend enrollment of the site into the Illinois Environmental Protection Agency (IEPA) voluntary Site Remediation Program (SRP). The SRP provides a structured path to receiving a No Further Remediation (NFR) letter that will be recorded in the deed to the property.

5.2 Reporting and Continuing Obligations

At this time, it appears contamination is not extensive other than the arsenic for soil ingestion. This exposure would only occur with active handling of the soil. As the site sits presently this exposure is not of concern.

If a federal cleanup action were to be required at the Property, the completed Phase I ESA on the Property, along with an issued reliance letter, would allow an authorized user to seek defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) as a bona fide prospective purchaser. A person or entity may qualify as a bona fide prospective purchaser if, among other requirements, such person made “all appropriate inquiries into the previous ownership and uses of the facility in accordance with generally accepted good commercial and customary standards and practices.” Knowledge of contamination resulting from all appropriate inquiries (AAI) (Phase I and Phase II ESAs) would not generally preclude this liability protection. A person or entity must make AAIs on or before the date of purchase and maintain compliance with the expiration dates of the Phase I ESA and certain Phase I ESA components as presented in ASTM E1527-21. A bona fide prospective purchaser must also comply with the following continuing obligations after taking title to the property:

1. Provide all legally required notices with respect to the discovery or release of any hazardous substances at the facility.
2. Exercise appropriate care with respect to hazardous substances by taking reasonable steps to stop any continuing release; prevent any threatened future releases; and prevent or limit human, environmental, or natural resource exposure to any previously released hazardous substance.
3. Provide full cooperation, assistance, and access to persons who are authorized to conduct response actions or natural resource restoration (including the cooperation and access necessary for the installation, integrity, and maintenance of any complete or partial response actions or natural resource restoration.
4. Comply with any land use restrictions established or relied on in connection with a response action, and not impede the effectiveness or integrity of any institutional control employed at the vessel or facility in connection with a response action.
5. Comply with any request for information or administrative subpoena issued under CERCLA.

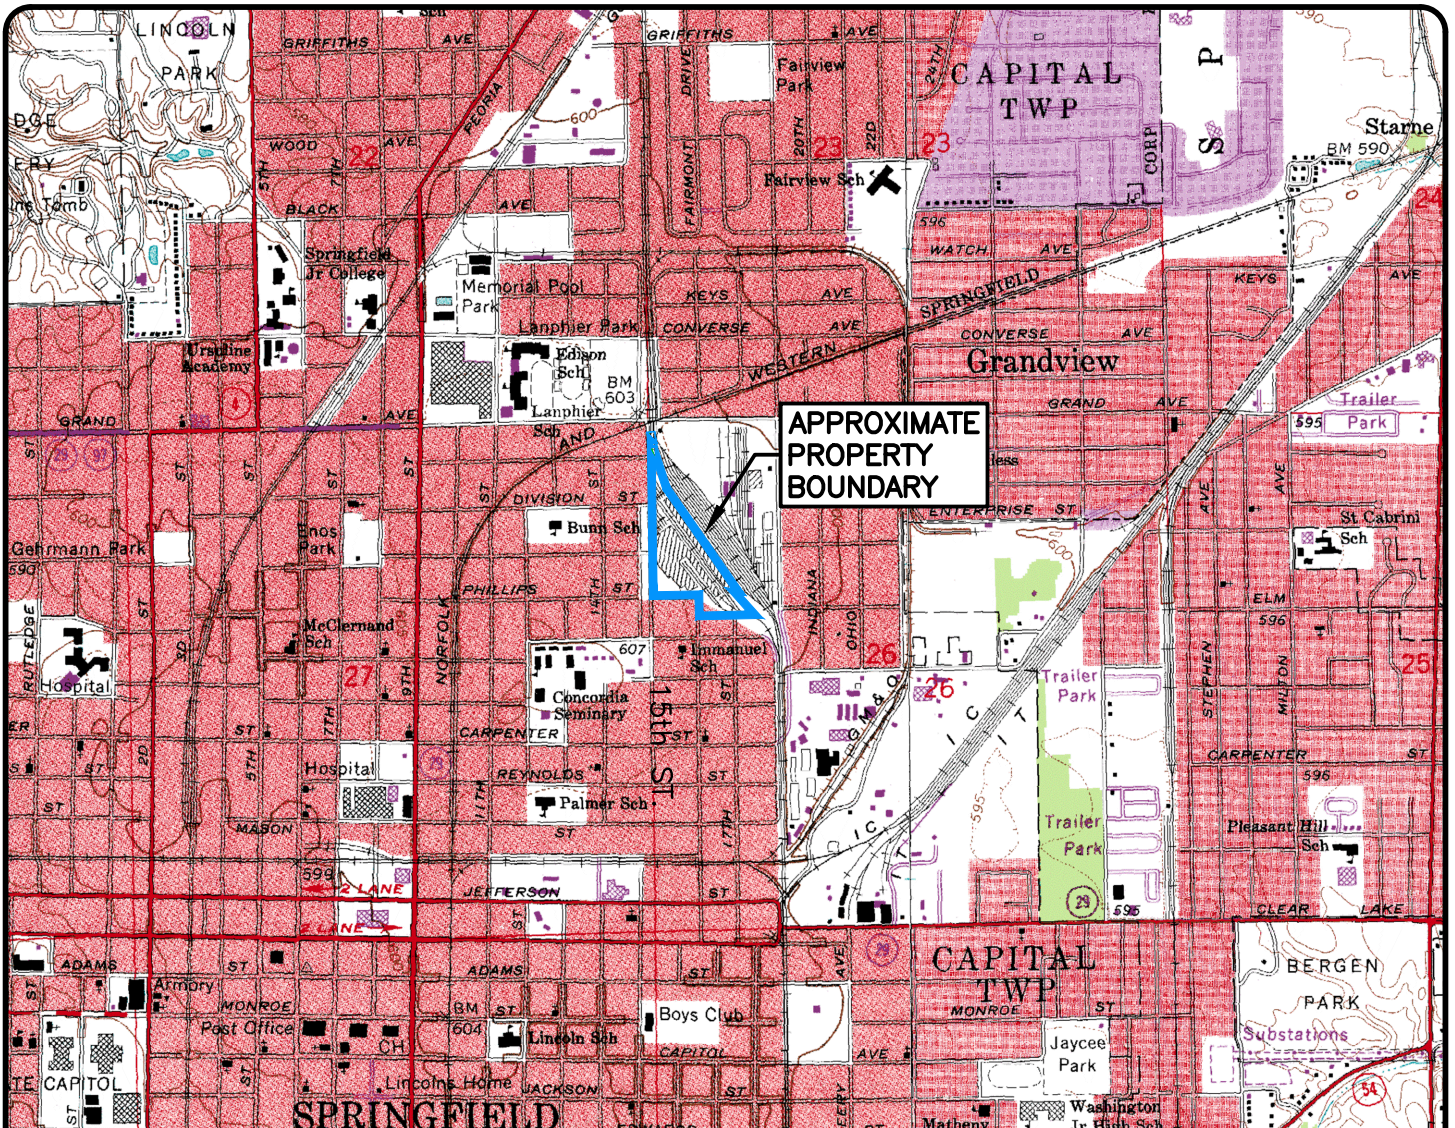

6.0 DISCLAIMER

This Phase II ESA was limited to the scope in our original proposal to identify potential environmental challenges associated with the RECs and significant data gaps identified in the Phase I ESA. This assessment included soil borings advanced to 16 or 20 feet bgs in specific portions of the Subject Property based on the identified RECs, data gaps and to provide a good distribution of sample points across the site. Sample locations were selected based upon accessibility and presumed areas where soil contamination would most likely be encountered, if present. Evaluation of groundwater was performed utilizing monitoring wells. Furthermore, the investigation did not involve sampling or analysis of soil gas, however based on the soil and groundwater results, it does not appear to be warranted. Soil and groundwater sample analysis was performed for only the noted parameters (VOCs, SVOCs, PCBs, Pesticides, CN, TAL Metals, and soil pH). Analytical results were compared to the Tier 1 soil ROs for residential, industrial/commercial, and construction worker receptors and Class I groundwater.

Tier 1 Soil Remediation Objectives (SROs) taken from TACO Appendix B, Table A and Table B
 Sample results and SROs presented in milligrams per kilogram (mg/kg)
 --- Remediation Objective not established
 U Qualifier indicates analyte not detected (less than Reporting Limit or Minimum Detection Limit)
 J Qualifier indicates estimated concentration above the method detection limit and below the reporting limit
bold Analytical results in bold indicate detected parameter
ital. Italicized analytical results indicate reporting limit for parameter is greater than a Tier 1 SRO
 Sample result exceeds one or more SRO
 SRO has been exceeded in one or more sample

Tier 1 Soil Remediation Objectives (SROs) taken from TACO Appendix B, Table A and Table B
Sample results and SROs presented in milligrams per kilogram (mg/kg)
--- Remediation Objective not established
U Qualifier indicates analyte not detected (less than Reporting Limit)
J Qualifier indicates estimated concentration above the method detection limit and below the reporting limit
bold Analytical results in bold indicate detected parameter
ital. Italicized analytical results indicate reporting limit for parameter is greater than a Tier 1 SRO
Sample result exceeds one or more SRO
SRO has been exceeded in one or more sample

QUALIFIERS

Project: 22-521 PH01 PILLSBURY

Pace Project No.: 40244262

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 415033

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 415134

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1q This analyte's recovery was below secondary source verification limits. The results may be biased low.

2q Due to the sample matrix, DI water was added to this sample on a one to one basis and the sample was stirred before analysis

3q This analyte's recovery was below secondary source verification limits. The results may be biased low.

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

CU The continuing calibration for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

H6 Analysis initiated outside of the 15 minute EPA required holding time.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

QUALIFIERS

Project: 22-521 PH01 PILLSBURY

Pace Project No.: 40244350

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

BATCH QUALIFIERS

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 415285

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 415293

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 415607

[1] The default spike range of the standard used for QC evaluation is C10-C28. All other carbon ranges may recover outside of spike limits because they may not cover the range of the spike used.

Batch: 415851

[1] The default spike range of the standard used for QC evaluation is C10-C28. All other carbon ranges may recover outside of spike limits because they may not cover the range of the spike used.

ANALYTE QUALIFIERS

1q Due to the sample matrix, DI water was added to this sample on a one to one basis and the sample was stirred before analysis.

2q This analyte's recovery was below secondary source verification limits. The results may be biased low.

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

QUALIFIERS

Project: 22-521 PH01 PILLSBURY
Pace Project No.: 40244350

ANALYTE QUALIFIERS

CU	The continuing calibration for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.
D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
E	Analyte concentration exceeded the calibration range. The reported result is estimated.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
M0	Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
P6	Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
R1	RPD value was outside control limits.
RS	The RPD value in one of the constituent analytes was outside the control limits.
S0	Surrogate recovery outside laboratory control limits.
S4	Surrogate recovery not evaluated against control limits due to sample dilution.

QUALIFIERS

Project: 22-521 PH01 PILLSBURY
Pace Project No.: 40244446

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.
ND - Not Detected at or above adjusted reporting limit.
TNTC - Too Numerous To Count
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.
MDL - Adjusted Method Detection Limit.
PQL - Practical Quantitation Limit.
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.
S - Surrogate
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.
LCS(D) - Laboratory Control Sample (Duplicate)
MS(D) - Matrix Spike (Duplicate)
DUP - Sample Duplicate
RPD - Relative Percent Difference
NC - Not Calculable.
SG - Silica Gel - Clean-Up
U - Indicates the compound was analyzed for, but not detected.
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.
Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.
TNI - The NELAC Institute.

BATCH QUALIFIERS

Batch: 415293

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: 415380

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1q Due to the sample matrix, DI water was added to this sample on a one to one basis and the sample was stirred before analysis
2q Due to the sample matrix, DI water was added to this sample on a one to one basis and the sample was stirred before analysis.
3q The internal standard recoveries were low for both times this sample was analyzed.
4q This analyte's recovery was below secondary source verification limits. The results may be biased low.
CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
CL The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.
CU The continuing calibration for this analyte is above laboratory acceptance limits. Analyte was not detected above the reporting limit in any of the associated samples.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

ANALYTE QUALIFIERS

- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- H6 Analysis initiated outside of the 15 minute EPA required holding time.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- P6 Matrix spike recovery was outside laboratory control limits due to a parent sample concentration notably higher than the spike level.
- R1 RPD value was outside control limits.
- RS The RPD value in one of the constituent analytes was outside the control limits.
- S0 Surrogate recovery outside laboratory control limits.
